		* First Trimester Combined Screen (nuchal translucency and maternal serology)					

Patient Information

- Gynaecological and early pregnancy scans are generally performed internally (transvaginally) to provide the best quality images. If however this technique is inappropriate for you, another method can be discussed when making your appointment.
- On the day of your appointment full payment is required by Cash, EFT or Credit Card (Diners and Amex are not accepted).
- Please be advised that the presence of children may distract the concentration of the person performing the scan and may also diminish you and your partner's appreciation of the ultrasound.
- Some fluid in your bladder is preferable for pregnancy scans over 15 weeks. One glass of water within the hour prior to your appointment should be sufficient. Avoid emptying your bladder prior to your ultrasound scan.
- An optional DVD is available with recorded images of your baby.
